

Junctions 9

Modular software for modelling and analysing roundabouts and priority junctions

Junctions 9 is a modular software package that delivers advanced roundabout and priority intersection modelling and analysis within a single graphical interface.

Analyse multiple scenarios with ease, perform comprehensive sensitivity tests and produce publication-ready reports.

Roundabout Models

The ARCADY 9 module includes separate models for standard roundabouts, mini-roundabouts and large/grade-separated roundabouts, all based on UK empirical research. ARCADY also includes the HCM 2010 roundabout model for North America.

ARCADY features a link to Autodesk Vehicle Tracking® to greatly enhance design capability and drastically reduce the amount of time taken to design and analyse alternative roundabout configurations.

ARCADY 9 Features:

- New: Roundabout geometry measurement tool
- New: Revised mini-roundabout model
- Model bypass lanes, linked-roundabouts, large and grade separated roundabouts
- ARCADY & HCM-2010 roundabout models included
- Import files from ARCADY 6 and 7
- Accident prediction
